
A Training Session on Solid Waste Management and Awareness

Pune, Maharashtra | 12th October, 2026

Ms. Yogita Deshmukh, faculty of S.B. Patil Public School attended a training session on “Solid Waste Management and Awareness” on 12th October, 2026 from 11:00 am to 05:00 pm The session was organised by the Pimpri Chinchwad Municipal Corporation (PCMC) at Shantai Hall, D.Y. Patil College of Pharmacy, Akurdi, Pune.

The training session focused on the importance of proper solid waste management and creating awareness about maintaining a clean and healthy environment. It enhanced her understanding of waste segregation, the principles of Reduce, Reuse, Recycle and Recover (the Four Rs), proper waste disposal, and the role of individuals and institutions in keeping their surroundings clean.

Teachers play a vital role in creating awareness about solid waste management and environmental protection. As educators, they can convey this important message to society by educating students about waste segregation, reducing the use of plastic, reusing materials, recycling waste, and maintaining cleanliness in their surroundings. They can encourage students to practise these habits at home and motivate them to spread awareness among their parents, family members, and neighbours.

S.B. Patil Public School has been organising awareness rallies, poster-making competitions, cleanliness drives, special assemblies, and activities related to waste management as part of its social responsibility initiatives. Teachers can guide students to become responsible citizens and environmental ambassadors who inspire others to adopt sustainable practices. In this way, teachers act as a bridge between the school and society, contributing towards building a cleaner, healthier, and greener environment.

The knowledge gained from this training session will help Ms. Deshmukh incorporate environmental awareness into her teaching practices and encourage students to take responsibility for proper waste management in their daily lives.

The training provided a valuable opportunity to enhance her understanding of environmental sustainability. She looks forward to sharing the knowledge gained with her colleagues and students and contributing to the school's continued efforts towards environmental awareness and sustainability.
