

The Grades IX and XI E-Waste Awareness Morning Mass Assembly

Pune, Maharashtra | 29th September, 2026

A thought-provoking Morning Mass Assembly on "E-Waste: The Hidden Danger in Your Old Devices" was conducted on Tuesday, 29th September, 2026, for students of Grades IX and XI. Hosted by the Yellow House, the assembly aimed to raise awareness about the growing e-waste problem and promote responsible waste management.

Students were introduced to e-waste and its environmental and health hazards, including the risks posed by toxic substances such as lead, mercury, cadmium and arsenic. A Moshi Depot case study highlighted the importance of waste segregation, safe disposal and responsible processing.

The presentation also encouraged students to use certified recyclers, donate or sell working devices, and explore manufacturer take-back programmes. The concept of the circular economy, with its emphasis on repair, reuse, recycling and reducing unnecessary consumption, was also discussed.

The assembly concluded with the call to "Recycle Properly, Repair Before Replacing, and Spread Awareness," followed by an engaging quiz that reinforced students' understanding of sustainable waste management. The session encouraged students to reflect on their consumption habits and their role in creating a cleaner and more sustainable future.
