
Enhancing Emergency Preparedness: A Mock Reverse Drill Conducted

Pune, Maharashtra | 3rd January, 2025

On 3rd January, 2025, a mock reverse evacuation drill was conducted for students from Nursery to Grade XII at 10:15 am. As soon as the alarm sounded, teachers escorted all students within the classrooms, and locked all doors and windows. Students and faculty secured themselves under desks, as is the way of these drills.

Organised by the school's Emergency Response Team, mock and reverse evacuation drills are held periodically to strengthen emergency preparedness among both students and staff.

The surprise nature of the drill ensured that responses were realistic, enhancing the school's readiness to act during real-life emergencies. The meticulous planning and execution by the Emergency Response Team demonstrated the school's commitment to fostering a safe and secure

environment.

Such initiatives underscore the importance of proactive safety measures, equipping everyone involved with the knowledge and confidence to respond effectively in critical situations.
